

PEPperCHIP® Chikungunya Virus Antigen Microarray

Product: PEPperCHIP® Peptide Microarray

Organism: Chikungunya Virus

Microarray Content: Chikungunya antigens (strain S27-African prototype):
nonstructural protein BHI3734/H804698 ESCA (ID: Q8JUX6)
structural polyprotein BHI3741/H804705 ESCA (ID: Q8JUX5)

Sequence Compilation: The protein sequences were elongated by neutral GSGSGSG linkers to avoid truncated peptides. The elongated protein sequences were translated into 15 aa peptides printed in duplicate with a maximum peptide-peptide overlap of 14 aa for full epitope coverage.

- peptide length/overlap: 15 aa / 14 aa
- number of peptides/spots: 3,728 / 7,456

Microarray Layout:

Each PEPperCHIP® Peptide Microarray is marked with microarray ID on the backside of the glass slide. The glass slide is accurately placed in an incubation tray with the microarray surface up if the microarray ID appears in the **top right corner** in a **mirror view** manner.

PEPperCHIP® Chikungunya Virus Antigen Microarray contains a single peptide array and is compatible with a 3/1-well PEPperCHIP® Incubation Tray.

PEPperCHIP® Chikungunya Virus Antigen Microarray further contains HA, Polio and c-Myc control peptides (28, 44 and 32 spots each control).
