

PEPperCHIP® Autoimmune Human Epitope Microarray

Product: PEPperCHIP® Peptide Microarray

Organism: Homo sapiens

Epitope related diseases: Autoimmune diseases of the:

- urogenital tract
- blood (e.g. antiphospholipid syndrome)
- cardiovascular system
- central nervous system (e.g. multiple sclerosis)
- endocrine system (e.g. diabetes mellitus)
- eyes, nose and throat
- musculoskeletal system (e.g. rheumatoid arthritis)
- peripheral nervous system
- skin and connective tissue (e.g. vitiligo)
- systemic autoimmune disease (e.g. systemic lupus erythematosus)

For more information, please visit the Immune Epitope Database (<http://www.iedb.org/>).

Microarray Content: 3,723 human B-cell epitopes associated with autoimmune diseases from the Immune Epitope Database (<http://www.iedb.org/>) including 534 citrullinated peptide variants and 29 peptide variants with acetyllysine.

More information on the epitope content is available in the Excel file: "Peptide Map Autoimmune Human Epitope Microarray.xlsx".

Epitope / Peptide Lengths: 4 - 50 aa / 4 to 17 aa depending on the epitope length; longer epitopes were translated into overlapping 17 aa peptides

Number of Peptides/Spots: 5,315 / 10,630 (peptides in duplicate)

Microarray Layout:

Each PEPperCHIP® Peptide Microarray is marked with microarray ID on the backside of the glass slide. The glass slide is accurately placed in an incubation tray with the microarray surface up if the microarray ID appears in the top right corner in a mirror view manner.

The PEPperCHIP® Autoimmune Human Epitope Microarray contains a single peptide array and is compatible with a 3/1-well PEPperCHIP® Incubation Tray.

Each PEPperCHIP® Autoimmune Human Epitope Microarray further contains additional HA, polio and c-Myc control peptides (78, 76 and 76 spots each control).
